

Energy policy

In our values and guiding principles, we have committed ourselves to using resources carefully. This claim is further concretised in our environmental policy, in which we outline our commitment to reducing emissions and energy consumption.

The continuous improvement of our energy performance is a prerequisite for sustainable mid-long term cost reductions, and is an important contribution to maintaining our competitiveness.

To realise these goals, we have introduced an energy management system in accordance with ISO 50001. We ensure that the requirements of this standard are implemented, and that energy management processes are continuously improved.

We will regularly ensure that:

- the necessary financial and structural requirements are met
- all employees are involved in the implementation of energy management,
- responsibilities are defined,
- the relevant laws and regulations are fulfilled,
- a regular assessment of energy efficiency takes place,
- energy-saving measures are planned and introduced,
- products that promote energy efficiency are procured,
- the planned activities to improve energy efficiency are continuously updated and
- the results are measured and reviewed through internal audits.

We promote energy-conscious behaviour among our employees both inside and outside the company by providing information and training.

Managers are obliged to apply the management practices applicable in their area of responsibility, to constantly monitor their effectiveness and to adapt them to the latest knowledge and requirements.

Lachendorf, 02/04/2024

Dr Matthias Rauhut
Managing Director
